

Technology Requirement

System Requirement for the Host machine

- Processor: 2.6 GHz or greater (i3 or higher), ideally hardware virtualization enabled for supporting virtual machines
- Operating System: Windows (10) or MacOS
- RAM: 4 GB or Higher (Recommended 8 GB or higher)
- Hard Drive: 256 GB or Higher
- Wireless Internet Connection: 802.11 n/ac
- Video Card: Integrated Graphic Card or Higher
- Active, up-to-date Antivirus software must be running on the laptop
- An active personal firewall must be deployed on the Laptop to counter common “attacks”

Note: The use of official laptops that might have corporate firewalls and other security apps installed is not advised. This is not suitable for many of the lab/project exercises as it involves changing network/security configurations for learning purposes.

Install Zoom Meetings for Live Mentor Sessions

All the virtual live sessions for this program will be conducted through Zoom meetings. Participants will need to access the Zoom meeting through meeting details available on their Olympus Dashboard “Upcoming Activity” or “Ongoing Activity” section.

- Download Zoom meeting from <https://zoom.us/download>
- Install zoom by following system-specific instructions (You may also use a web-based client to connect to all session)

Note -

VS code needs to be installed before the live session for practice.

The required software for the program will be installed during the live sessions for practice.
